

Procedural Decomposition

Write a program to print these figures using methods.

You can start by copying and pasting the output into a class in jGrasp and putting println statements around them. Then, decide which statements should be grouped as methods.

Once you are finished with this, please take some time to read the jGrasp tutorial on the website and get familiar with the program's various commands.

Done already? Here, have a puzzle:

I like my eggs cooked for exactly 15 minutes or I get very grumpy in the morning. You have to cook me an egg with only two timepieces: an 11 minute hourglass and a 7 minute hourglass.
