

## Bringing it all together: HTML/CSS review

HTML is a language understood and interpreted by

`<body>`, `<h1>`, `<p>` are all examples of HTML

In HTML, the `/` character (as in `</body>` or `</h1>`) means

The HTML command `` results in

The HTML command `<a href="http://disney.com">visit now</a>` results in

In HTML, a class (as in `<p class="emphasis">`) is used to

In HTML, a `div` is used to

In HTML, a `span` is used to

External CSS files are good because

To use an external CSS file, the HTML needs to

In CSS, the part before the `{` is (for example, the `p` in `p {color: red;}`)

In CSS, the `;` means

The CSS command `p {color: red;}` results in

The CSS command `.happy {background-color: red;}` results in

When stuck on HTML and CSS, you should

Write complete HTML and CSS to produce a page with a large red header that says "Cats", a

paragraph with blue text and a 2px solid yellow border that says "Cats are cuddly" and a picture cat.jpg that is 100px wide.
