

AP CS Homework: Parameters, Loops, & Math methods
Due Friday 11/04

1. Parameter mystery. Write what is output by the following code:

```
public class MysteryNums {  
    public static void main(String[] args) {  
        int x = 15;  
        sentence(x, 42);  
  
        int y = x - 7;  
        sentence(y, x + y);  
    }  
  
    public static void sentence(int num1, int num2) {  
        System.out.println(num1 + " " + num2);  
    }  
}
```

2. Find the error. The following program has 9 errors. Circle them all and fix as appropriate.

```
public class Parameters {  
    public static void main() {  
  
        double bubble = 867.5309;  
  
        double x = 10.01;  
  
        printer(double x, double y);  
  
        printer(x);  
  
        printer("barack", "obama");  
  
        System.out.println("z = " + z);  
    }  
  
    public static void printer(x, y double) {  
  
        int z = 5;  
  
        System.out.println("x = " + double x + " and y = " + y);  
  
        System.out.println("The value from main is: " + bubble);  
    }  
}
```

3. Expressions. Write the results of each of the following expressions. Make sure to use the proper type (.0 for a double, " " for a String).

Math.ceil(9.17) _____
Math.pow(2, 4) _____
Math.sqrt(64) _____
Math.floor(12.73) + Math.max(8, 5) _____
Math.abs(Math.min(-1, -3)) _____

4. Loop review. What output is produced by the following program?

```
public class OddStuff {  
    public static void main(String[] args) {  
        int number = 32;  
        for (int count = 1; count <= number; count++) {  
            System.out.println(number);  
            number = number / 2;  
        }  
    }  
}
```

5. Loop review. Write some nested for loops to produce the following output:

000111222333444555666777888999
000111222333444555666777888999
000111222333444555666777888999

6. Hard parameter mystery. Write what is output by the following code:

```
public class MysterySoda {  
    public static void main(String[] args) {  
        String soda = "coke";  
        String pop = "pepsi";  
        String coke = "pop";  
        String pepsi = "soda";  
        String say = pop;  
  
        carbonated(coke, soda, pop); //  
        carbonated(pop, pepsi, pepsi); //  
        carbonated("pop", pop, "koolaid"); //  
        carbonated(say, "say", pop); //  
    }  
    public static void carbonated(String coke, String soda, String pop) {  
        System.out.println("say " + soda + " not " + pop + " or " + coke);  
    }  
}
```
