Exploring CS: Website Design

Final Website Project Design Sheet:

Project Approved on: ____ by _____

Complete this Design Sheet and have it reviewed & approved by Mr. Bergquist before you start main work on your website. **You will need to create a new folder in our shared class folder and place all the final website files and CSS in your subfolder.**

1) TOPIC: Describe your topic and the different pages (at least 4) you will be creating on this topic – be explicit on what each page will cover. **Must be different than your Starter Website.**

2) Source Material: Where do you plan to get the material presented in your website; what is your main source? You will be required to document where all your information, images and other details are from – this will demonstrate what is required to avoid plagiarism, just like you need to show your sources for a paper. If you are presenting your own photos and material, you will want to indicate that they are owned by you. We will work together how to do this correctly.

3) OVERALL SITE DESIGN: Draw a Mock Up of your common website elements that will be **shared on all pages** especially the navigation (links) to other pages and general layout. If needed, use a separate piece of paper and attach it to this document.

4) KEY INFORMATION FOR EACH PAGE: Detail the specific items you will include on each of your web pages (at least 4), like images, links, key paragraphs, lists and other elements that will create your website. You can list these out and/or draw a Mock Up of each. Feel free to attach more pages if needed.
